

MARC DAMON OLIVER

Software Engineer Intern

Through my career in the Animation industry, I discovered a passion for problem-solving, which led me to transition into game development. It was in this line of work that I nurtured my technical talents and was driven by a desire to automate tasks, making my work more efficient. This shift allowed me to pursue and grow in coding. Now, I am eager to leverage my skills and embrace the challenges of a new career path, focusing on further development.

Education

Software Development
(Part Time Course) CTU Durban, NQF 5

Programming Foundation (FQPT)
(Part Time Course) CTU Roodepoort Campus, NQF 4

Diploma in Digital Animation
The Animation School, Woodstock, Cape Town, South Africa

National Senior Certificate
West Ridge High School, Roodepoort, Johannesburg. South Africa

Work Experience

Thinkforward

Junior Software Engineer Intern

March 2026 - Present

- Actively participate in SCRUM ceremonies, leveraging SCRUM methodologies to effectively manage tasks, sprint planning, and deliverables.
- Develop and optimize Dockerfiles to containerize applications, ensuring consistent, reproducible, and portable environments across development and production.
- Create and maintain Terraform configuration files (.tf) to provision, configure, and manage scalable cloud infrastructure resources.
- Design and implement database schemas using Dexie.js and IndexedDB for efficient client-side data storage in web applications.
- Configure and deploy AWS Lambda functions to enable scalable, serverless backend processing.
- Deploy and manage Amazon EC2 instances to host backend services.
- Configure Amazon S3 buckets for efficient hosting and delivery of frontend web assets.
- Design and manage Virtual Private Clouds (AWS VPCs) to establish secure, isolated, and scalable network architectures.
- Implement load balancers to optimize traffic distribution and enhance backend service reliability and performance.
- Build and design RESTful backend APIs using Node.js and Express.js frameworks.
- Develop responsive frontend applications using React and Tailwind CSS to consume backend APIs and deliver seamless user experiences.
- Create React applications capable of ingesting files and extracting relevant information programmatically.
- Design and implement database schemas and data models using Mongoose ODM with MongoDB for robust application persistence layers.
- Utilize Confluence for comprehensive task management, documentation, and team collaboration.
- Implement CI/CD pipelines using GitHub Actions to automate web application deployment triggered by repository commits, ensuring rapid and reliable delivery.
- Employ GitHub Copilot as an AI-assisted coding partner to enhance productivity, assist with debugging, and streamline development workflows.

Sunrise Animation Studios

Lighting Artist / Compositing Artist

May 2022 - Mar 2025

- Work within team environment delivering on assigned tasks within a required deadline
- Lighting 3D models in a still environment to deliver high quality renders for a feature film
- Bring all renders together to deliver the final product

Triggerfish Animation Studios

Texture Artist / Finaling Artist / Lighting Artist

Apr 2019 - Mar 2021

- Work with concept artists to texture the look and feel of 3D models for feature film
- Work within a pipeline and deliver assigned tasks on a tight deadline
- Work with senior artists to create different mood lighting effects within different scene environments for feature film
- Scene optimization to deliver better pipeline integration
- Work within team environment delivering on assigned tasks to bring the project to a quality finish

Appy Studios

Texture Artist/3D Modeling/Lighting Artist

Nov 2021 - Apr 2022

- Work together with other artists to concept and texture the look and feel of 3D models
- Research real-world designs to implement in potentially new 3D Assets
- Scene optimization and testing to deliver better pipeline integration
- Work within team environment delivering on assigned tasks within a required deadline
- Lighting 3D models in a still environment to deliver high quality renders for NFT market

Egamea

Junior C# Developer

work experience continued

Sep 2017 - Mar 2018

- Collaborate in team-based environment with version control
- Collaborate with senior game developers to deliver on clients vision
- Game testing and optimization
- Create and develop working UI and to deliver a better user experience
- Work closely with the design team to develop working 3D models within the game environment using the Unity game engine

The Boiler Room Productions

3D Artist / Junior C# Developer

Mar 2018 - Apr 2019

Apr 2017 - Sep 2017

- Work and optimize Computer Aided Design (CAD) models for use in game development
- Create 3D models as required for use in game development
- Collaborate in team-based environment with version control
- Design and code working game concepts for use in VR and game simulations for clients using Unity Game engine and C# language
- Game debugging/testing and optimization

The Flying Circus

Junior Lighting Artist:

Mar 2015 - Apr 2017

- Create quality 3D models for tv series and a feature film
- Create realistic and artistic properties with textures for 3D models
- Work within a pipeline and deliver assigned tasks on a tight deadline
- Work closely within a team to develop the mood lighting for a tv series and feature film
- Colaborate with Senior artists to develop and deliver on Director/Producer ideas and concepts
